RE: B.S. and H.B.S. major in Human Physiology

On behalf of the Department of Biological Sciences, I write to support your proposal to include BISC 207 and BISC 208 as required classes in your proposed Program in Human Physiology. Based on your deactivation of the Medical Scholars concentration within the Exercise Science major which contained the same classes, I understand that you anticipate overall about 15 students per year would select this new Human Physiology program. Of course, enrollment for each student will depend on fulfillment of course pre-requisites, and/or other potential constraints due to registration issues.

Our faculty are in agreement with supporting your program.
